To: Algae-X

Subject: Great Product!

I recently repowered my boat with larger engines which necessitated new props, etc. When I put the size props recommended to me, my boat would not come up on plane and I was laying a horrible cloud of thick, smelly, black smoke. I had to scrub down a filthy, sooty transom each time I moved the boat. Everyone on board was choking for air. It was ruining my business. What a mess!

Then I saw your ad in Motorboating magazine and ordered your Algae-X unit sized for my needs and your fuel conditioner to treat about 200 gallons of diesel in my fuel tank that I did not want to lose. I installed the unit, treated the fuel, waited the recommended time, and headed out across the water.

What a pleasant surprise! The boat came to plane a little sluggishly, but it made it up the first time with minimal smoke. The engines began to sound better by the hour, and after a little running, the boat began to pop up on plane with no difficulty. The amount of smoke began to diminish radically, and cleaning the transom became an infrequent chore.

I have now had the unit in service for about a month, and it seems the boat runs better each time I take it out. My fuel economy has improved, the smoke problem has all but disappeared, the engines are quieter and smoother, and my top speed has increased over 20% to over 40 mph.

I wanted you to know that with great thanks to your product, I am now running one of the cleanest (if not the cleanest) diesel boat in the area. I expect much greater engine and injector life, and am enjoying running my boat more than ever before. I recommend Algae-X to every diesel boater I talk with. Thanks for a great product.

Sincerely,

Jim Newman
