Mr. Bill O'Connell

Dear Bill,

I am remiss in not having gotten back to you sooner. It was a pleasure meeting you at the Oakland Boat Show September 15, 2004. I was very impressed by your explanation of the operation of the Algae-X units. As I had mentioned to you, I was interested in Algae-X some time ago. I just pulled out the letter and literature you sent me March of 2000.

Needless to say now the rest is history, I have installed the three units, two LG-X 500s and one LG-X 200, on my mains and the generator. Total time for installation was less than an hour. I used one bottle of AFC-705 in each tank when I fueled a couple of days later as you had instructed. I took some photos of the installation; this is what they look like on a Bayliner 4788 with 315 Cummins.

Again, thank you very much in getting me off the dime, I should have the cleanest running boat on the West Coast after a couple of tanks of fuel.

Sincerely,

Ralph
