Subject: Algae-X Fuel System

Mark:

It was nice to visit with you at the Atlantic City Boat Show. I was afraid that the Algae-X product would be just a flash in the pan. First I want to tell you that the Algae-X fuel management system really does work as you said it would. I, at first, thought it wasn't working because I still had the smoking problem at high RPM's but as you stated, after three tanks of diesel fuel the black smoke cleared and the engines are running excellent at any RPM. This probably sounds like an advertisement and I guess it is but the truth is, it worked. My only problem is where to find the Algae-X additive? I haven't been able to find it anywhere in Vermont. Please let me know so I can keep the system working properly. See you at the next boat show in Atlantic City.
