Dear Billy,

Over the past several years many of our clients have experienced significant results by using the ALGAE-X In-Line Fuel Conditioners on their diesel engines. The most noted benefits reported by our customers have been extended filter & injector life, lower exhaust temperatures , and reduced emissions.

Cummins Mid-South LLC- Marine Division realizes that the quality of fuel used by our customers is not always optimal. We also realize standards set forth in the US for fuel quality is not necessarily followed World Wide . Our goal with Tier II is to try and optimize all environmental influences on the high pressure injector systems required to meet stringent Tier II guidelines . In light of our experience with your products and to ensure that our Tier II engines have the best chance to meet or exceed our performance standards, I am pleased to inform you that all Tier-II engines delivered by our Marine Division will have ALGAE-X In-line units as well as improved filtration systems as part of the standard package.

Best regards,

Cummins Mid South LLC
