Latest Model ALGAE-X[®] Mobile Tank Cleaning System

The MTC-350 restores fuel quality and removes water, sludge and other contaminants from diesel and oil storage tanks.

Ft. Myers Beach, FL: ALGAE-X[®] International has announced its latest innovation in fuel conditioning technology. The **MTC-350** is a mobile tank cleaning system used to remove built up tank sludge and water that accumulates in fuel storage tanks. In the same operation, the **MTC-350** reconditions the fuel to restore Optimal Fuel Quality and is especially designed for the needs of marinas and vehicle service facilities as well as home heating oil and standby generator tanks.

The new Model 350, "The Diesel Doctor" is a smaller capacity version of its bigger brother, the **MTC-1000**. It incorporates state-of-the-art components including a Separ Fuel Filter/ Water Separator that removes free water and particulate contaminants. The filter is also equipped with a liquid filled stainless steel vacuum gauge to indicate when to back-flush or replace the cartridge. For heavily contaminated tanks a cleanable stainless steel wire mesh filter cartridge is available to minimize cartridge replacements. Other system components include a continuous duty gear pump, a system timer, and an **LG-X 1500** Fuel Conditioning Unit to restore fuel to pristine condition.

The **MTC-350** is engineered for heavy-duty use and minimal operating cost. All components are protected by a molded cover and installed on a back-plate mounted on a high quality hand truck, with a welded drip tray for spill prevention.

The **MTC-350** comes complete and ready to use with high quality reinforced suction and discharge hoses, shut off valves on the inlet and outlet side of the system. Its 3.5 GPM pump provides sufficient capacity to quickly and easily clean tanks up to 500 gallons.

ALGAE-X Fuel Conditioning Systems and Tank Cleaning equipment are available through dealers and distributors worldwide.
